PROFILE

Mid-level Full Stack Developer focused on **Agentic AI and LLMs in production**: agent orchestration, *tool/function calling*, memory and planning, hybrid RAG and deterministic *guardrails* for action control. End-to-end experience with Python (FastAPI, Pydantic), Clean Architecture and cloud (AWS, Azure OpenAI), with a focus on reliability, agent behavior evaluation and failure mitigation. Currently enrolled in the **Dev Eficiente** specialization program and studying **Go** for high-performance backends.

PROFESSIONAL EXPERIENCE

Mid-level Full Stack Developer | Jan 2026 - Present

Citel Software

- Architected and built an internal **multi-tenant** AI platform (schema-per-tenant, around 400 distributor clients) that lets users query the ERP in **natural language** through an LLM.
- Implemented **guardrails and safety mechanisms**: deterministic validators for generated SQL, an explicit table *whitelist*, per-module access control and input/output validation before any action runs.
- Dynamic injection of a data dictionary into the agent context from metadata, reducing schema hallucination.
- Built an internal LLM-assisted *code review* tool integrated into the pre-commit workflow.
- Built a **hybrid RAG** (dense, sparse BM25 and ColBERT) on **Qdrant** over roughly 25k chunks of ERP technical documentation, with reranking and retrieval evaluation.
- Cut the RAG ingestion pipeline from about 60 minutes to 4 to 5 minutes through asynchronous parallelization.
- Full stack development with **Python, Node.js, TypeScript and Next.js**, including a superadmin panel for tenant management.
- Infrastructure and environment management with **Docker** (building and maintaining containers), **CI/CD** pipelines and deploy automation.

Junior Software Developer (AI) | Jun 2025 - Jan 2026

D3 Works

- Developed **autonomous agents** with *prompt chaining* and *routing*, using **native function calling** (OpenAI SDK and Groq) and **Pydantic** for structured output validation, on an in-house architecture without heavy frameworks.
- WhatsApp sales agent in production (FastAPI, MongoDB and n8n), with *human-in-the-loop*, scheduled re-engagement and proactive rescheduling based on dates extracted from natural language.
- Agent behavior validation**: analyzed 106 real conversation sessions, identified 4 critical failure patterns and iterated on prompts and decision policies based on the findings.
- Multi-agent orchestration with CrewAI and Azure OpenAI** for a diagnostic agent system, plus specialized agents for the education segment, gathering requirements directly with clients.
- RAG** and ETL pipelines over documents and visual PDFs, with *embeddings*, chunking and answer quality evaluation.
- Python digital products on the **AWS** ecosystem (Serverless Framework, Lambda, SQS, S3), applying **Clean Code, Clean Architecture and Design Patterns**.
- Automated testing** culture with Pytest (unit and E2E), keeping deliveries stable.
- Infrastructure and environments with **Docker**, Uvicorn and server access via SSH; PHP APIs and *triggers* and **MongoDB** data handling.

Junior Full Stack Developer | Jun 2024 - Jun 2025

Citel Software

- Application development with **Python, Node.js, TypeScript and Next.js**.
- Implemented an AI solution with **RAG** to support ERP users, improving technical support efficiency.
- Mentored an intern on technical tasks and development best practices.
- Hands-on **AWS** training (EC2, S3, Lambda), applied to REST API integrations and deploy automation with **GitHub Actions**.
- Process automation with **n8n**, including an internal tech talk on use cases and integrations with the company APIs.
- Agile ceremonies (**Scrum**), *code reviews* and management of the GitHub versioning workflow.
- Represented the company at industry events: **Oracle Dev Tour São Paulo** (Mar 2025) and **Oracle IA em Ação** (Feb 2025).

EDUCATION**Unaerp, University of Ribeirão Preto (Aug 2021 - Aug 2026)**

B.Sc. in Computer Engineering

- Capstone project Chef AI (highest grade): cross-platform mobile app that identifies food items on receipts and in pantry photos with the Gemini multimodal model, keeps a digital inventory the user can review and suggests recipes through a conversational assistant that respects registered restrictions and preferences. Custom backend in FastAPI and PostgreSQL with Clean Architecture, model orchestration, structured response validation and dynamic context enrichment; front end in React Native/Expo with TypeScript.
- Undergraduate research (25th and 26th CONIC): *machine learning* to forecast seasonal disease outbreaks from weather data and DataSUS, the Brazilian public health database (Random Forest, Gradient Boosting).
- R, Python and MySQL for data modeling; PyTorch and Scikit-learn.
- App development in Java and Flutter; electronic circuits (Arduino, ESP32, Servo).

ONGOING SPECIALIZATION**Dev Eficiente**

deveficiente.com

- Software development specialization with an applied AI track: agents, RAG, guardrails, prompt engineering and LLM integration in real systems.
- Studying Go for backend development, with a personal financial API project (go-ledger-api).

TECHNICAL SKILLS**AI and LLMs**

Agent architectures (multi-agent, tool/function calling, memory, planning, reflection), RAG (dense, sparse BM25, ColBERT, reranking), embeddings, prompt engineering, guardrails and input/output validation, human-in-the-loop, agent behavior evaluation and testing, prompt injection mitigation, OpenAI SDK, Google Gemini, Groq, CrewAI, Azure OpenAI

Languages

Python, TypeScript, JavaScript, Java, SQL; Go (actively studying)

Frameworks and tools

FastAPI, Pydantic, Flask, Node.js, Express, Next.js, React Native, n8n, Serverless Framework, Pytest

Databases

PostgreSQL, MySQL, MongoDB, Qdrant (vector)

Cloud and DevOps

AWS (Lambda, SQS, S3, EC2, Serverless Framework), Azure OpenAI, OCI, Docker, Git, GitHub Actions CI/CD, Linux/SSH

Software engineering

Clean Code, Clean Architecture, Design Patterns, unit and E2E testing, code review, Scrum

TEACHING AND COMMUNITY

- Instructor of the **Introduction to n8n** short course at UNAERP (3 days): HTTP fundamentals, multi-step workflows and AI agent patterns with LLMs.
- Internal tech talk on automation and API integration with n8n.
- Technical documentation and product roadmaps for engineering teams.

LANGUAGES

English: Advanced (C1) | **Portuguese:** Native

SOFT SKILLS

Clear and effective communication, translating technical risk into business impact, working in cross-functional teams, proactivity and autonomy, continuous learning, problem solving, technical leadership.
